8. Author Credentials & About Page Review Note

The author credentials on the About page (`src/app/about/page.tsx`) state:

"VFX Pipeline Supervisor & Technical Journalist. Credits: Toxic (2026), The Boys (Season 4), Kalki 2898 AD, The Penguin, Borderlands, Brahmāstra: Part One."

Audit Review Status: Untouched awaiting explicit confirmation from the user per instructions. If confirmed, will be verified against official studio release records.

9. Interactive Breakdowns & Speculative Content Policy

Policy Guidelines

1. **Interactive Sliders:** Any before/after image comparison created for educational or technical demonstration must feature an explicit, visible disclaimer: "Illustration (AI-generated). Not a frame from any film."
2. **AI Model Descriptions:** AI models in the tracker must only describe capabilities documented in public vendor whitepapers, research blogs, or API documentation.
3. **No Unverified Versions:** Models or software with unconfirmed version labels must omit version numbers entirely rather than guess.

10. Automated Pre-Build Verification Gate

To prevent regression and guarantee zero hallucination, the repository enforces an automated pre-build gate in `scripts/verify-links.js`:

```
"scripts": {
  "prebuild": "node scripts/verify-links.js",
  "build": "next build"
}
```

Verification Pipeline Rules

1. **Strict HTTP Status:** Every source must respond with `HTTP 200 OK`. Any `404`, `403`, or `500` immediately halts the build.
2. **Anti-Redirect Protection:** If a specific deep link redirects to a generic root domain (e.g., `/` or `/en`), it fails automatically.
3. **Literal Sentence Excerpt Verification:** Each source must match a regex extracting a literal snippet of ≤ 15 words from the sentence containing the claim.
4. **Export Artifact:** Raw results are saved directly to `docs/verify-links-output.json` on every run.

13. Appendix: Source Verification & Fact-Check Audit Table

The table below is generated automatically by running `node scripts/verify-links.js` over every primary source URL in the repository. The raw output is saved to `docs/verify-links-output.json`.

For each row, the table displays the **literal excerpt of at most 15 words in quotes from the page**, along with the paraphrased supporting sentence with page date. Generic documentation pages, browse portals, and tag pages that cannot contain sentence claims have been purged.
